<p>The project didn't run because the index.js contains a syntax error ... I can see you tried to quickly fix the index.js before the deadline but you didn't quite succeed :) Lots of syntax errors I cannot run the server .. anyways, I can see no models, even classes ? I mean it's not a big deal if you don't have mongo here because that's sprint 1 but you need to at least have classes ? Moving on ... One thing I need to mention is coding guidelines and conventions, you need to always put whatever you require at the very top and never require something in the middle of the code ... Also you need to follow a specific order when you write the routes .. for example you need to write the post then the get then the put then the delete routes .. in that order, this is way easier to read and maintain ... I see you also forgot to write the delete routes in almost all the entities ... Other than that I can see you guys and girls have tried hard and did a good job, just fix these issues in the upcoming sprints, cheers !</p>
